

Study Medical Science & Public Health!

The German health care system is one of the best developed systems in the whole world. Doctors and dentists benefit from the high level of medical and dental technology in Germany. The German pharmaceutical industry is known throughout the world, thanks to the pharmaceutical companies Bayer and Schering. Medical training in Germany is carried out on the basis of scientific fundamentals, but is also practical and patient-oriented. The following are conveyed in the course of the studies: fundamental medical, interdisciplinary and methodological knowledge, practical and psychological skills, the intellectual and ethnical foundations of medicine and a medical attitude towards individuals and the public as a whole. This knowledge and these skills are what is needed to be able to successfully treat patients later as a doctor or pharmacist in the fields of prevention, diagnostics, therapy and rehabilitation.

We actively help you apply to study at a German institution of higher education! Here is a SELECTION of innovative and interdisciplinary degree programmes at universities and universities of applied sciences in Germany:
